To-do12

Design-project #20  
Set up Kinetic energy model algorithm

Design-project #28  
Set up Fuel consumption model

Design-project #32  
Filter raw data

Design-project #33  
I would like to view map routes

Design-project #31  
Determine driver behaviour

Design-project #30  
Set up Flespi fetch request

Design-project #24  
setup backend logic to extract data from the database

Design-project #8  
I would like to have records of multiple sensors

Design-project #29  
display the data on the draft web application

Design-project #35  
I would like to see the cost factor based on the energy and fuel consumptions

Design-project #34  
I would like to see a drivers and vehicles summary page

Design-project #36  
WebApp 2.0 Final Front-End

Final14

Design-project #10  
Ensure installation of Teltonika configurator

Design-project #11  
Save sensor configuration file

Design-project #17  
Web-app Front end logic development

Design-project #23  
setup login page, registration page

Design-project #25  
back-end logic to add data to the database

Design-project #18  
Web-app Back end logic development

Design-project #21  
Set up Flespi device connection

Design-project #12  
Set-up sim card to server connection

Design-project #16  
Set-up database

Design-project #26  
Security for the login page

Design-project #22  
Make a connection from web app to database

Design-project #27  
do front-end logic for draft web app

Design-project #7  
I would like to store records of the vehicle information

Design-project #3  
I would like to login to my account
